General Purpose Terminal Replacement

Modern replacement solution for environments that depend on general purpose terminals or dumb terminals.

The General Purpose Terminal Replacement or GPTR is a proven device based on thin client technology meant to be a reliable and flexible solution for an environment that depends on RS232 text terminals. It comes with everything necessary to replace a text terminal, including free tech support, to make installation into existing serial and ethernet based networks quick and easy.

- Modular in design, offering easy repairs and replacements
- Offers more versatility with added functionality
- No moving components
- Rated for longer run time hours

Keyboard
Standard PC 102 Keys
